

PVALARM

SAFETY TO SOLAR

PVALARM

Secure your PV installation against theft

PV installations are a valuable investment for both individuals and businesses. To optimally protect this investment, it is essential to focus on security. PValarm offers the perfect solution to secure your solar panel installation against theft and damage.

WHY PVALARM

Reduce the Risk

The risks of theft and damage to solar panels are increasing. By using the PValarm, it is easy to secure your installation against theft and sabotage.

Notifications

Specific notifications for any form of sabotage, such as cutting cables, theft of inverters, power outages, opening the cover, or when the product is smashed.

Theft

With PValarm, you are protected against theft and installation or consequential damage. In case of incidents, an SMS is automatically sent to your mobile phone.

Complete System

PValarm is delivered as a complete system by default. This means that the central system (PVA01AS) is installed in combination with the signal box (PVAS01). Thanks to its modular structure, PValarm is easily expandable both in terms of control and signal level.

Four potential-free alarm contacts

PValarm enhances functionality with four potential-free alarm contacts. These contacts can be used for various applications, such as additional acoustic and visual signals, connection to a building management system, and/or an alert to a private alarm centre (PAC). These contacts offer several possibilities.
